

Application No. 10/723,329  
Amendment "A" dated April 10, 2006  
Reply to Office Action mailed March 6, 2006

### **AMENDMENTS TO THE SPECIFICATION**

In paragraphs 0001 and 0010, please correct the typographical errors as noted by the changes in the following marked-up version of each paragraph:

[0001] One problem with advanced editing tools and corresponding editors, however, is that they are not currently configured to extend the advanced editing features, such as validation, syntax coloring, and intellisense, to code segments that are written in different languages, even if they belong to the same file.

[0010] Thereafter, edits made in the primary application view are replicated to the secondary documents. The functionality of the secondary editors, in response to the edits, can then be identified and provided in the primary application view. For example, functionality provided by the secondary editors, such as, but not limited to, syntax coloring, statement completion, validation, context help, error reporting, navigation, and document formatting can be recognized and duplicated in the primary application view, such that it appears to the user as if the primary editor is inhercently providing the advanced editing features that arc in reality being provided by a plurality of independent secondary editors.
